PERMA-CRETE® PITT-FLEX®

100% Acrylic High-Build Elastomeric Wall Coating

Perma-Crete Pitt-Flex elastomeric coating by PPG PAINTS™ prevents hairline cracks in masonry, protecting against water infiltration and helping you achieve uniform, pinhole-free coating jobs. This flexible coating remains intact as masonry expands and contracts due to temperature changes.

Exceptional Dirt Resistance | Prevents Efflorescence and Blistering

Wind-Driven Rain Certification | Great Coverage Rate
EXCEPTIONAL DIRT RESISTANCE
To help your next job look freshly coated for years to come, we formulated Perma-Crete Pitt-Flex elastomeric coating to deliver outstanding dirt resistance properties. Dirt and grime can simply be rinsed away with water.

Testing Method
A uniform coat of dirt is applied to the test panels and allowed to set in. The dirt is then washed off in the laboratory and the panels are measured for change in color.

PREVENTS EFFLORESCENCE AND BLISTERING
Be confident that your coatings will look good and adhere long-term.

Testing Method
Coatings are applied to one side of a plaster of Paris disk and allowed to dry for three days. The uncoated bottom of the disk is then placed in a caustic solution for 7 days and rated for the presence of inorganic salts on the surface of the coating. Coatings can be rated at the same time for blistering resistance, adhesion loss, etc.

WIND-DRIVEN RAIN CERTIFICATION
Protect against harsh, wet weather with just two coats — not three. A two-coat application of Perma-Crete Pitt-Flex elastomeric coating passes ASTM D6904-03 for wind-driven rain resistance.
EARLY APPLICATION
We formulated our Perma-Crete Pitt-Flex elastomeric coating to help keep your production moving. That’s why it can be applied to concrete that is just seven days old and has a pH of less than 13.

GREAT COVERAGE RATE
Enjoy more efficient application with coatings that go further than competitors’ with a lower required wet mil rate (film thickness).

MPI #113 APPROVED
Perma-Crete Pitt-Flex elastomeric meets the Master Painters Institute’s certification requirements, so you can be confident in its tested and proven performance.

APPLICATION DOWN TO 35° F
You can apply Perma-Crete Pitt-Flex elastomeric coating even at low temperatures — down to 35° F — to help keep your production moving during the colder months. This is a significant improvement compared to the leading competitor, which can only be applied down to 50° F.

BACKED BY PPG

OUR PAINT. YOUR PRIDE.
At PPG, we know and appreciate the feeling of pride that comes from hard work and a job well done. And we believe there are no shortcuts. That’s why we pour more than a century’s worth of know-how into every can of paint — know-how earned through leadership in demanding fields, including aerospace, industrial manufacturing, marine, and oil & gas industry applications. When you apply PPG Paints, you’re applying the entire breadth and depth of this experience. So that when you finish the job and take a step back, you can feel truly proud of what you have accomplished.

Find the PPG Paints brand at more than 2,400 company-owned stores and independent dealers nationwide, or visit ppgpaints.com.
